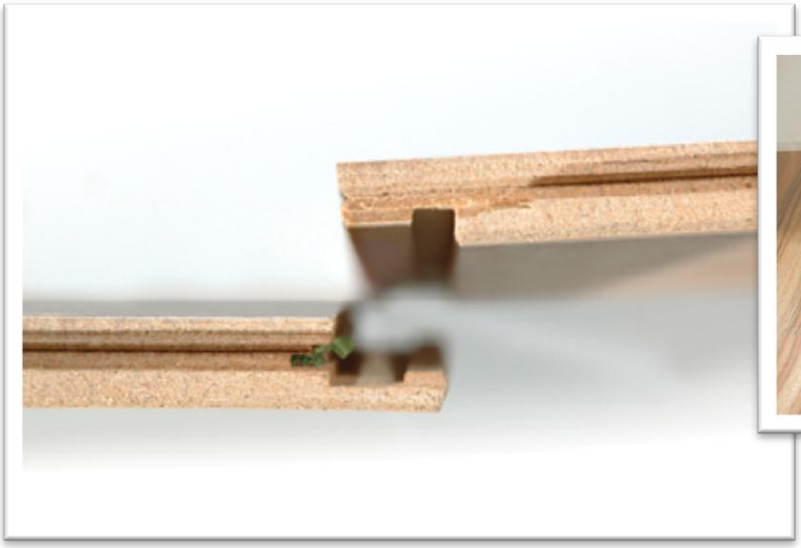
# **Classen** Installation Instructions

If you are looking for a stunning floor with the easiest installation process on the market, your search is over.

MegaEasy – MegaFast – MegaStrong – Megaloc



The Classen Megaloc locking system is one of the most innovative systems available and reduces installation time by 60%. Classen is one of the leaders in laminate flooring world. All floors are made in Germany where special developments make the brand unique.

The Megaloc locking system features a locking-clip in the short grooves which allow the next plank to be locked in directly from above. This allows you to install your new laminate floor up to 3 times faster, even if you've never installed laminate before! In addition, the Megaloc locking system is equipped with ISOWAXX. All edges are coated with a thin layer of wax to add moisture protection to every plank and joint!

The quick laying system has a locking mechanism on the short side. The panels are simply dropped down into the joint of the previously laid row.  As planks are lowered, the special patented lock located on the short end of laminate will create a seamless joint. When a panel is installed into place, the locking element also locks and a stable connection is created.  All you have to do is just to press along the short side until you hear a click, and your plank is locked in!
